(AREA COI

Dear Josh,

July 25

Thank you for the note about Rogers. I am checking on the possibility.

Enclosed you will find 2 preprints concerning gene therapy. Any comments or criticisms will be welcomed. I have always thought you were the first one to suggest the use of animal viruses for gene therapy. I can't find the mention of it in your papers. Obviously, I have misread you mind jotting down the first reference to animal viruses and gene therapy you have made and forwarding it me?

Regards
H. Vasten
